

aardio 范例: 对称式协程

```
//对称式协程
import console;
import coroutine;

class 公司 {
    ctor(){
        var coroutine = ..coroutine;

        this.客服 = coroutine.create(
            function(工单){

                while(工单){
                    工单 = coroutine.transfer(this.用户,"已解决," + 工单)
                }

                coroutine.transfer( ,"老板,累得不如狗,给加班费不? !")
            }
        )

        this.用户 = coroutine.create(
            function(消息){

                for(i=1;100;1){
                    ..console.log( coroutine.transfer(this.客服,"工单号:" + i) );
                }

                coroutine.transfer(this.客服)
            }
        )

        ..console.log( coroutine.transfer( this.用户,"欢迎光临,有任何问题请联系客服" ) );
    }
}

coroutine.run(公司)
console.pause();
```
