aardio 范例: 网卡设备

```
//网卡设备
import console;
import sys.networkCards;
import inet.adapterInfo;

//列出所有网卡设备
for networkCard in sys.networkCards.each(){
    console.log(networkCard.netConnectionId)
    console.log(networkCard.description)
    console.log(networkCard.pnpInstanceId)

    var adapterInfo = inet.adapterInfo.get(networkCard.adapterName);
    if(adapterInfo){
        console.log(adapterInfo.mac); //MAC 地址
        console.log(adapterInfo.adapterName); //GUID
        console.log(adapterInfo.description); //网卡描述
        console.log("网卡已启用");

        if(adapterInfo.operStatusUp){
            console.log("网卡已连接");
        }
        else {
            console.log("网卡未连接");
        }

    }
    else {
        console.log("网卡已禁用");
    }

    console.more()
}

console.pause(true);
```
