aardio 范例: 切换输出设备

```
//切换输出设备
import console;
import dotNet.audioDevice;

var defRenderId = dotNet.audioDevice.getDefaultRenderId();
var defCaptureId = dotNet.audioDevice.getDefaultCaptureId();

for( dev,devId,devName in dotNet.audioDevice.each() ){
    if(devId == defRenderId) console.writeText("默认音频输出设备");
    if(devId == defCaptureId) console.writeText("默认录音设备");

    console.log(devId,devName);
    if(!string.find(devName,"XGIMI") ){
        dotNet.audioDevice.setDefault(devId);
    }
}

console.pause(true);
```
